Experience with Middleware like Dell Boomi, Mulesoft, Azure, or Oracle Integration cloud will be an added advantage.

Education:

Bachelor's degree in computer science, engineering, IT, software or relevant field, otherwise equivalent years of relevant industry experience. We recognize institution of higher learning which are accredited by the council for higher education accreditation or its equivalent.

Job Title: Data Engineer

Job Type: Full-Time (W2 on Amglv)

Salary: \$70K-\$120K depends on experience

Location: New York, NY (Remote until Covid-19)

End Client: Banking Client

Responsibilities:

Build analytics tools (Python based) that process customer data to provide timely results to our frontend applications.

Identify, design, and implement internal process improvements: automating manual processes, optimizing data delivery, re-designing infrastructure for greater scalability, etc.

Implement processes and systems to monitor data quality, ensuring production data is always accurate and available.

Work closely with design, product, and operations to own our backend data systems through their entire lifecycle.

Skills Requirements:

- Strong Python and SQL skills.
- Experience with cloud-native infrastructure and tools (Linux, Docker, Kubernetes).
- A DevOps mindset for continuously delivering value in a collaborative team. Comfortable with
- Git/Github processes, code review, and CI/CD build automation.
- Automated unit, integration, data quality testing experience.
- Passion for software craftsmanship and clean code.
- A love of continuous learning, improvement, and delivery.

Date Posted: Updated: 01/01/2025

- Comfort in working and communicating with senior executives as well as business analysts.

Nice to have:

- Google Cloud Platform experience (BigQuery, Cloud Storage, PubSub, GKE).
- Experience with statically-typed languages, especially those relevant to data engineering (Scala/Kotlin/Java, Rust, Go).
- Cloud data pipeline tools experience (Apache Beam, Scio, Spark, etc).

Education:

Bachelor's degree in computer science, engineering, IT, software or relevant field, otherwise equivalent years of relevant industry experience. We recognize institution of higher learning which are accredited by the council for higher education accreditation or its equivalent.

Job Title: Python Developer

Job Type: Full-Time (W2 on Amglv)

Salary: \$70K-\$120K depends on experience

Location: New York, NY (Remote until Covid-19)

End Client: Banking Client

Skills Requirements:

- Expert knowledge of Bash / Python scripting
- UNIX admin, comfortable with Root access to servers
- Container orchestration and management (deploy docker containers, logging, trouble shooting in a container environment, backup and restores in Container environment)
- CI/CD devops experience with orchestration tools like ansible, puppet.
- Desired Skills/Qualifications/System Experience requirements:
- Experience with multiple package managers (NPM, YARN, GIT, MAVEN)
- Familiarity with managing infrastructure within a public cloud provider (AWS/Google Cloud Platform/Azure)
- Blackduck (or other open-source scanning software) a plus
- Operations support functions
- Exposure to working with applications in DMZ
- Postgres for basic database interactions
- Good communication skills

Education:

Bachelor's degree in computer science, engineering, IT, software or relevant field, otherwise equivalent years of relevant industry experience. We recognize institution of higher learning which are accredited by the council for higher education accreditation or its equivalent.

Job Title: Cloud Architect

Job Type: Full-Time (W2 on Amglv)

Salary: \$70K-\$120K depends on experience

Location: New York, NY (Remote until Covid-19)

End Client: Banking Client

Role Description:

5+ years of experience. For this role, you must be conversant with the architecture development methodologies (e.g., TOGAF) that is required for a large application ecosystem.

Skills Requirements:

- Analyze current architecture to determine best Azure solution.
- Work with cross functional teams to implement and support.
- Design Azure Compute components (Containers/AKS, Azure functions, logic apps).
- Design Azure storage - Blob storage, Databases, Event Hub, Service bus.
- Azure network and security components.
- Experience in cloud governance.
- Design and architect Microservices and Microfrontends.
- Present options to stakeholders and defend solution.
- Understanding of the declarative capabilities of one or more cloud infrastructure providers (I.E. AWS, Google Cloud Platform, Azure) and the ability to build solutions based on these capabilities.
- Extensive project experience migrating from legacy systems and deploying complex cloud-based solutions.
- Previous ownership of the technical solution architecture.
- Project experience architecting, implementing, and optimizing core infrastructure, networking and cloud-based services for business teams or consumers.
- Experience reviewing and implementing DevOps and Agile standards and practices.
- Experience configuring and tuning cloud hosted solutions and platforms.
- Experience with Microservices, Functions, Event-driven/reactive programming or other Cloud Native architectures.
- Ability to navigate complex organization politics, build trust and credibility with clients.
- Strong communication skills and ability to translate complex technical topics to senior stakeholders within the client.

Education:

Bachelor's degree in computer science, engineering, IT, software or relevant field, otherwise equivalent years of relevant industry experience. We recognize institution of higher learning which are accredited by the council for higher education accreditation or its equivalent.
